Padova Technologies Teams Up with MartinFederal Consulting to Provide High Performance Computing to Department of Defense Civil Agency Communities

Glen Burnie, Md. (Jan. 13, 2010) –Padova Technologies, a leading manufacturer of [storage solutions](#), [specialized servers](#), rugged and deployable solutions and [high performance computing systems](#), announced today that it has teamed up with MartinFederal Consulting, a Dadeville, Alabama-based technology solutions and management consulting firm, to design and implement high performance computing and storage solutions for the Department of Defense Civil Agency Communities as well as several universities and research institutions throughout the country.

“We’re thrilled to be working with MartinFederal,” said Keith Fischbach, president of Padova Technologies. “Padova is working to transform the way public organizations and research institutions think of advanced supercomputing products by making HPC and high capacity storage affordable without sacrificing features, power or performance. Teaming up with MartinFederal will allow us to use both companies’ strengths to proliferate advanced HPC in key market segments within the government, military and university communities.”

Through its four lines of business – cyber and systems security, enterprise and IT support, intelligence services and programmatics -- MartinFederal has been providing technology and management consulting services to a number of government organizations, corporations and research institutions including the Federal Civil Agencies and the Department of Defense (DoD), the Department of Energy and the Oak Ridge National Laboratory.

“We are excited to partner with Padova Technologies to provide the defense and educational community with powerful, affordable HPC solutions,” said Corey L. Martin, president and chief executive officer of MartinFederal Consulting. “Padova has led the market in manufacturing cost-effective, value-added high-end computing/processing solutions by their keen ability to form strategic alliances with organizations like Cray, Infotrend, QLogic, RedHat – just to name a few.”

Padova Technologies specializes in providing customized servers and storage systems, high performance computing solutions and rugged and deployable systems that meet the dynamic needs of today’s organizations. With more than 35 years of experience, Padova has engineered solutions for some of the nation’s most influential research institutions, military organizations, global defense and technology corporations and other government entities. For more information on Padova Technologies, its solutions or products go to www.padovatech.com.
